Submission Date: 2026/08/07

1. Introduction

➤ Project Overview

The **Web-based Event Photography Management System** is a software solution designed to improve the management of event photography services through a centralized online platform. The system enables customers to conveniently access photography services while providing photography staff and administrators with efficient tools to manage daily operations.

Many photography businesses still rely on manual methods such as phone calls, social media messaging, spreadsheets, and paper records to handle customer bookings and service information. These traditional approaches often result in booking conflicts, data duplication, delayed communication, and difficulties in maintaining accurate records. Customers may also find it inconvenient to obtain service information, track bookings, or receive updates efficiently.

The proposed system addresses these challenges by providing a web-based platform that allows customers to register, browse available photography packages, submit event booking requests, track booking status, receive digital photographs, and provide reviews and feedback. At the same time, photography staff and administrators can manage photography packages, event bookings, album designs, photo delivery, promotional activities, and customer information through a centralized system.

By digitizing these processes, the system improves operational efficiency, reduces manual workload, enhances data accuracy, and provides better communication between customers and the photography business. The proposed solution aims to deliver a more organized, reliable, and user-friendly service management experience for all stakeholders.

➤ Objectives

The main objectives of the proposed system are:

- To develop a web-based platform for managing event photography services efficiently.
- To provide customers with a convenient method to register, view photography packages, and request event bookings.
- To enable photography staff and administrators to manage photography packages, bookings, album designs, photo delivery, promotions, and customer feedback.
- To improve the accuracy, organization, and accessibility of photography-related information.
- To reduce manual record-keeping and streamline photography service management.
- To enhance communication and overall customer satisfaction through an easy-to-use online platform.

➤ Target Users and Stakeholders

The proposed system is designed to serve the following users and stakeholders:

- **Customers (End Users):** Register, book photography services, track booking status, receive digital photographs, manage their profiles, and provide reviews and feedback.
- **Administrator:** Manage user accounts, monitor system activities, and maintain overall system operations.
- **Photographer:** Manage assigned events and update event-related information.
- **Album Designer:** Create, edit, and finalize customer photo albums according to requirements.
- **Promotion Manager/Marketing Staff:** Manage promotional campaigns, special offers, and package discounts.
- **Photo Delivery Staff:** Upload, organize, and deliver digital photographs to customers through the system.

➤ Scope and Limitations

The scope of the Web-based Event Photography Management System is to support the core activities of an event photography business through a centralized web application. The system includes customer functions such as **User Registration & Login, Event Booking, Booking Status Tracking, User Profile Management, and Review & Feedback**. It also supports staff and system functions including **Package Management, Album Design Management, Photo Delivery Management, Promotion Management, and Email Notifications**.

The proposed system has several limitations. Online payment processing and payment gateway integration are not included in the current version. The system also excludes financial management, AI-based photo editing, automatic photo selection, and real-time communication features. In addition, the system requires an internet connection to access its services and is primarily designed for event photography businesses.

2. System Overview Diagram

3. Functional Requirements

Functional requirements define the main features and services that the **Web-based Event Photography Management System** must provide. The system supports customer activities and staff/system operations to efficiently manage photography services.

➤ Customer Functions

1. User Registration & Login

The system allows customers to register, log in, and securely access system features.

2. Event Booking

Customers can submit event booking requests by entering required event details and selecting photography services.

3. Booking Status Tracking

Customers can view and track the progress of their booking requests.

4. User Profile Management

Customers can view and update their personal information.

5. Review & Feedback

Customers can submit reviews and feedback about photography services.

➤ Staff/System Functions

1. Package Management

Staff can create, update, delete, and manage photography packages.

2. Album Design Management

The system supports managing album designs and customer album requirements.

3. Photo Delivery Management

Staff can upload, organize, and deliver digital photographs to customers.

4. Promotion Management

Staff can create and manage promotional offers for photography services.

5. Email Notifications

The system sends email notifications regarding booking updates, service information, and photo availability.

4.Non-Functional Requirements

Non-functional requirements define the quality attributes of the **Web-based Event Photography Management System** to ensure it is efficient, secure, and user-friendly.

1. Performance

The system should provide fast response times for operations such as event booking, searching photography packages, and accessing digital photos.

2. Usability

The system should provide a simple, intuitive, and user-friendly interface that allows customers and staff members to use the system easily.

3. Security

The system should provide secure user authentication and protect customer information and uploaded photos from unauthorized access.

4. Reliability

The system should ensure accurate data processing, minimize errors, and maintain high availability for users.

5. Scalability

The system should support an increasing number of users, bookings, and stored photos without reducing system performance.

6. Maintainability

The system should be easy to maintain, update, and enhance when new features or improvements are required.

7. Compatibility

The system should be accessible through modern web browsers and support different devices such as desktops, tablets, and mobile devices.

5. Major Stakeholders / Users

The proposed **Web-based Event Photography Management System** will be used by several stakeholders, each performing specific responsibilities to ensure the smooth operation of the system. These stakeholders interact with different functions based on their roles and contribute to providing an efficient and organized photography service.

- 1. Customer:** Customers are the primary users of the system. They can book photography services, choose photography packages, view delivered photographs, submit reviews, and raise complaints if they experience any issues with the service.
- 2. Operations Manager:** The Operations Manager is responsible for managing event bookings, scheduling photography sessions, and assigning photographers to events. This role ensures that all bookings are properly organized and completed on time.
- 3. Senior Event Photographer:** The Senior Event Photographer captures photographs during events, uploads completed photos to the system, and manages the delivery of photographs to customers through the web application.
- 4. Album Designer:** The Album Designer creates, edits, and finalizes digital or printed photo albums according to customer preferences before they are delivered.
- 5. Finance & Administration Executive:** This stakeholder manages photography packages, pricing information, and promotional offers to ensure customers have access to accurate and up-to-date service details.
- 6. Customer Relations Officer:** The Customer Relations Officer manages customer communication by responding to inquiries, handling reviews, and resolving complaints through the system's ticket management feature.
- 7. Administrator:** The Administrator oversees the overall operation of the system by managing user accounts, maintaining system settings, and ensuring that authorized users can access the appropriate functions.
- 8. IT Coordinator:** The IT Coordinator provides technical support, monitors system performance, and maintains the technical infrastructure to ensure the web application operates reliably.

2. Six Major Functions

6.1 Event Booking & Management

Who will use it

This function is primarily used by **Customers** and the **Operations Manager**. Customers use the system to book photography services, while the Operations Manager manages bookings, schedules events, and assigns photographers.

What it does

The Event Booking & Management function enables customers to book photography services through the web application. It allows users to view available booking details, schedule events, assign photographers, update booking information, and cancel bookings when necessary. The function supports Create, Read, Update, and Delete (CRUD) operations to ensure efficient booking management.

Expected outcome

This function simplifies the booking process, reduces manual work, improves scheduling accuracy, and ensures efficient management of photography events. It also enhances customer convenience by providing an organized and reliable online booking system.

6.2 Photography Package Management

Who will use it

This function is mainly used by the **Finance & Administration Executive**, who is responsible for managing photography packages and pricing.

What it does

The Photography Package Management function allows staff to create, update, and manage photography packages offered by the company. It includes managing package details, pricing, availability, and removing outdated packages. The function supports CRUD operations to maintain accurate and up-to-date package information.

Expected outcome

This function ensures that customers can easily view available photography packages with accurate pricing. It also enables the company to manage packages efficiently and respond quickly to changes in customer requirements.

6.3 Album Design Management

Who will use it

This function is used by the **Album Designer**, who is responsible for creating and finalizing customer photo albums.

What it does

The Album Design Management function supports the creation, editing, previewing, and finalization of customer photo albums. It also allows the designer to maintain album records through CRUD operations, ensuring that album information is properly managed.

Expected outcome

This function helps produce high-quality photo albums that meet customer expectations while improving the efficiency and organization of the album design process.

6.4 Photo Delivery Management

Who will use it

This function is mainly used by the **Senior Event Photographer**, who manages the delivery of completed photographs to customers.

What it does

The Photo Delivery Management function enables photographers to upload, organize, and deliver completed photographs securely. It also allows staff to track photo delivery and maintain photo records using CRUD operations.

Expected outcome

This function provides customers with secure and timely access to their event photographs while improving the efficiency of photo storage and delivery.

6.5 Promotion Handling and Management

Who will use it

This function is used by the **Finance & Administration Executive**, who manages promotional offers and discounts.

What it does

The Promotion Handling & Management function allows staff to create, update, and manage promotional offers and discounts. It also enables viewing promotion details and removing expired promotions through CRUD operations.

Expected outcome

This function helps attract new customers, encourage bookings, and support marketing activities by providing effective promotional campaigns and discount management

6.6 Review and Complaint Management

Who will use it

This function is used by **Customers** and the **Customer Relations Officer**. Customers can submit reviews or raise complaints, while the Customer Relations Officer manages and responds to them.

What it does

The Review & Complaint Management function allows customers to submit reviews and complaints after receiving their photographs. Complaints are recorded as tickets, enabling the Customer Relations Officer to view them, mark them as **Read**, update their status, respond to customers, and resolve issues efficiently.

Expected outcome

This function improves customer satisfaction by providing an organized way to manage reviews and complaints, ensuring timely responses and better service quality.

7.Minor Functions

In addition to the six major functions, the system includes several minor functions that support the overall operation of the Event Photography Management System. These functions improve usability, security, and the overall user experience.

1.User Registration

Allows new customers and staff members to create an account by providing the required personal information before accessing the system.

2.Login & Logout

Enables registered users to securely access the system using their credentials and safely log out after completing their activities.

3.Password Reset

Allows users to reset or recover their password securely if they forget their login credentials.

4.Notifications

Sends important updates to users, such as booking confirmations, schedule changes, photo delivery notifications, and complaint status updates.

5.User Profile Management

Allows users to view and update their personal information, contact details, and account settings.

6.Search & Filter

Helps users quickly find bookings, photography packages, promotions, or customer records using search and filtering options.

8.System Limitations/ Constraints

The proposed Web-based Event Photography Management System has several limitations and assumptions that should be considered during development and usage. These constraints define the system's operating environment and expected conditions.

1.Internet Connection Required

The system is web-based; therefore, users must have a stable internet connection to access features such as event booking, package management, photo delivery, and complaint handling.

2.Limited to Web Platform

The proposed system is designed as a web application and is intended to be accessed through modern web browsers. A dedicated mobile application is not included in the current project scope.

3.Cloud Storage Dependency

Photographs and related files are stored in cloud storage. As a result, the system's file management and photo delivery services depend on the availability and reliability of the cloud storage service.

4.User Authentication Required

Users must register and log in with valid credentials to access the system. This helps protect user data and ensures that only authorized users can perform system operations.

5.Initial Storage Capacity Limit

The system will initially provide limited cloud storage capacity for storing photographs and files. Additional storage requirements may require future upgrades or cloud storage expansion.

9. Simple Timeline

- Week 03 -** Project proposal preparation and proposal presentation.
- Week 04 -** Gather and analyze system requirements with stakeholders.
- Week 05-** Prepare Software Requirements Specification (SRS) document.
- Week 06 -** Design system architecture, use case diagrams, and database structure.
- Week 07 -** Develop user interface (UI) prototypes and finalize the system design.
- Week 08 -** Begin implementation of the six major functions.
- Week 09 -** Continue system development and integrate major modules.
- Week 10 -** Complete implementation and conduct unit testing for individual modules.
- Week 11 -** Perform system integration and integration testing.
- Week 12 -** Conduct system testing, fix identified bugs, and improve performance.
- Week 13 -** Prepare the final report, user documentation, and presentation.
- Week 14 -** Final project demonstration, presentation, and project submission.

10.Conclusion

The proposed **Web-based Event Photography Management System** aims to provide an efficient and user-friendly solution for managing photography services through a single online platform. The system enables customers to book photography services, select suitable packages, receive their photographs digitally, and communicate with the company through reviews and complaint management. At the same time, it helps staff manage bookings, packages, album design, photo delivery, promotions, and customer interactions in a more organized and efficient manner.

Implementing this system will reduce manual work, improve service quality, enhance customer satisfaction, and increase the overall efficiency of photography business operations. By integrating all major functions into one centralized web application, the system will provide a more reliable and convenient experience for both customers and staff.

Our team is committed to completing this project successfully by following the planned project timeline, applying appropriate software engineering practices, and working collaboratively throughout each development phase. Regular communication, task allocation, testing, and continuous improvement will help ensure that the proposed system meets user requirements and is delivered as a reliable and high-quality web application.
